

Process & Decision Documentation

Project/Assignment Decisions

During the assignment, I had missed the step to verify Git installation. In a later step, I was not able to see the sign-in to GitHub prompt in VS Code, which impacted my ability to push my files to GitHub. When I attempted to download it, my disk was full, and my computer could not complete the download. I immediately checked my system settings to determine what was taking up the most storage space, permanently deleted what was unnecessary and managed to free up enough storage space to download Git. From there, I was successfully able to complete the rest of the steps in the Side Quest.

Gen AI Documentation

No Gen AI was used in this assignment.
